

## The HIV Patient Module

was designed to meet the requirements of major HIV hospitals and clinics. The HIV Module provides complete tracking of patient medical records and visit history with automatic carry-over of medications, trials and diagnoses, along with providing follow-up and case management support.

## Ryan White Title I-IV

The HIV Module provides filing of federal Ryan White reports for funding and tracks all required data along with information used by care providers, doctors, nurses, counselors, case managers and social workers. It tracks APA and HIP services, co-pays, insurance, grants and other funding sources.

## Complete Care

Coupled with other CSST modules, the HIV Module allows providers to track and provide services at levels never before achieved with a single software solution. From internal referrals and medical support to social services, job placement and housing, no other software is as complete.
